

# Portfolio Tracker Documentation

## Stock Tracker external data sources:

- Yfinance: offers a Pythonic way to fetch financial & market data from Yahoo! finance
  - o <https://pypi.org/project/yfinance/>
  - o *May require users to install yfinance if they are developing locally*
- Finance.Yahoo.com: offers full financial, market, and news information direct from Yahoo!
  - o <https://finance.yahoo.com/>
- List of other sources, *because It's all just people getting data from other people*
  - o [https://help.yahoo.com/kb/finance-for-web/SLN2310.html?locale=en\\_US](https://help.yahoo.com/kb/finance-for-web/SLN2310.html?locale=en_US)

## User Overview:

- Thinking we show an example UI, with bubbles/callouts that define that source data and brief explanation of what's happening “behind the curtain”

## Error Handling:

- Core functionality of single or multiple stock lookup will be obfuscated somehow, will need to determine how we're managing user inputs and returning errors

**Troubleshooting:**

- FAQ
- How can users ask for help
